

WORKING PAPER · 2026 · VERSION 1.0

Creditax.ai

Bridging Nigerian Tax Compliance and Creditworthiness: a grounded tax assistant, deterministic calculators, a compliance-based credit health score, and a verified tax professional marketplace

MissionCTRL Creative Tech Research Labs

Lagos, Nigeria · September 2026

This working paper distills the Creditax research foundation (product, pricing, security, legal, roles, feature and roadmap documents, September 2026). It is written for prospective investors, partners, and clients. All figures trace to the foundation documents; projections are labelled as scenarios in the companion financial document.

ABSTRACT

Creditax.ai is a free-to-start platform that bridges Nigerian tax compliance and creditworthiness. A user signs up, asks tax questions and receives answers grounded in published Nigerian law (the Nigeria Tax Act 2023, the Nigeria Tax Administration Act 2023, and FIRS guides), calculates PAYE, VAT, withholding and company income tax with citable figures, sees a credit health score built from compliance and financial data, and, when human help is needed, is referred to a verified tax professional inside our own marketplace.

The founding insight: timely filing and consistent tax payment are among the strongest signals of financial reliability, yet no credit product in the Nigerian market treats compliance as a scoring signal. Bank-statement scoring misses the taxpayer whose paperwork is clean but whose banking history is thin. Creditax closes that gap, and in doing so manufactures a proprietary dataset no competitor holds: verifiable compliance behaviour, linked across tax types, languages, and professions.

The product ships in four languages (English, Yoruba, Hausa, Igbo) across a four-tier, Naira-only pricing model with tight free limits and a conversion target of one paid conversion per ten active free users within ninety days. Ten guided Skills (from withholding-tax credit recovery to employer compliance badges) grow revenue without growing interface complexity. A six-month, ₦10,000,000 Phase 1 delivers the core platform; a 24-week, six-phase roadmap ends in public launch.

PART I: CONTEXT

Where the idea came from

The 2024 reform created the questions; the credit market left the answers unpriced. At a glance: the 2023 reform acts, 7.5% VAT, 5-30% withholding, 17 income tax bands, and a compliance-to-credit bridge that exists nowhere in the market today.

1 · Introduction and Origins

Creditax began with two observations made in the same quarter of 2026.

First, the reform. Nigeria's 2023-2024 tax reform package (the Nigeria Tax Act 2023, the Nigeria Tax Administration Act 2023, and Capital Gains Tax amendments) rewrote brackets, rates, and filing procedure. Every employee, freelancer, trader, and small business owner woke up to questions the old materials no longer answered: what do I owe now, by when, and on what authority. Public guidance exists (FIRS publishes guides and circulars), but it is written for practitioners, not for the nurse in Surulere or the POS-agent in Kano.

Second, the scoring blind spot. Nigerian credit scoring runs on bank transaction data. That data captures spending and income flow, but it never sees the tax file. A trader with six years of clean filings and zero bank debt is scored thin; a salaried worker who has never filed is scored on salary alone. Compliance behaviour, the single most legible and verifiable signal of financial discipline a Nigerian adult generates, is simply not priced.

Creditax exists to fix both at once: make tax legible to the person who owes it, and make that person legible to the lender who serves them.

What Creditax keeps, and what it replaces

The old way (2026 status quo)	The Creditax way
Generic chatbots that answer world-tax questions with no source	Answers restricted to published Nigerian law, with a citation on every response
Spreadsheets and accountant memory for PAYE, VAT, WHT	Deterministic calculators tied to the exact section of the NTA or FIRS guide
Credit scored on bank statements alone	Compliance history weighted into a credit health score alongside bank data
Finding a tax pro by word of mouth or street-sign ads	A verified marketplace with CAC-checked businesses and proximity search
English-only tax materials	Full experience and answers in English, Yoruba, Hausa, and Igbo

Encode, do not lecture: make the simple parts instant, and hand the hard parts to a verified human.

2 · The Global Tax-Technology Landscape

Tax software at global scale has proven one thing: when guidance is authoritative and calculation is deterministic, consumers pay for it. TurboTax serves tens of millions of filers a year. Stripe Tax prices billions in cross-border transactions. Intuit, H&R Block, and a generation of fintech rails were built on the same recipe: rules maintained centrally, answers users can trust, filing that finishes in an afternoon. None of that machinery has landed on the compliance-credit bridge, and none of it is built for Nigeria.

Need	What exists today	What is missing
Consumer tax guidance	Generic assistants; practitioner-only FIRS materials	Cited, Nigeria-only answers at consumer scale
Tax calculation	Hand-coded PAYE/VAT rules inside payroll tools	Versioned rules with legal references, exposed for reuse
Credit scoring	Bank-statement data via open-banking providers	Compliance behaviour as a scoring factor
Professional supply	Word-of-mouth, unverified directories	CAC-verified profiles with proximity search
Language access	English-only government guidance	Yoruba, Hausa, Igbo across the whole experience

Why the gap persists

Tax content is jurisdictional, perishable, and high-stakes. A generic assistant that answers a Lagos VAT question with foreign or outdated rules is worse than no assistant at all, because the user cannot tell the difference until it costs them a penalty. Maintaining correct Nigerian rules is expensive, which is exactly why it is defensible: the platform that does it owns the moat.

7.5% STANDARD VAT RATE FIRS VAT Guide, Schedule 2 exemptions	5-30% WHT RATE BAND By payment type and recipient status	17 PAYE BANDS NTA 2023, Schedule 1	10% CAPITAL GAINS (INDIVIDUAL) CGT amendments, 2024 reform
---	---	---	---

Creditax's position is deliberately narrow: Nigeria only, published law only, cited answers only. Depth is the moat; breadth is the trap.

3 · The Nigerian Compliance and Credit Gap

Every actor in the chain is either a beneficiary of this product or a reason it has not been built yet.

Actor	What they want	What the status quo costs them
Employee	Correct PAYE, a TCC when a visa or loan needs one, no surprises	Guesswork between reform-era brackets; TCC assembled by paper chase
Freelancer / trader	Income documented so lenders take them seriously	"Invisible income": real earnings, zero verifiable footprint
SME owner	VAT, WHT, and CAC obligations met without a retainer	Over- or under-remittance; WHT credits deducted by clients but never claimed
Tax professional	Verified clients, faster practice tooling	Client acquisition by street ads; manual bulk calculations
Lender / fintech	Repayment signals that survive thin bank files	Compliance history invisible in scoring
Regulator (FIRS, NDPC)	Voluntary filing up; lawful data handling	Education gap; unverified advice spreading in the informal channel

The unclaimed-credit problem (the wedge)

Clients deduct withholding tax from vendor payments. Vendors who never claim the credit notes forfeit real money, amounts sitting on the books of firms that paid them. Skill 01 (Section 7) turns that forfeited balance into the platform's highest-revenue-first bet: a 5% success fee on recovered credits, filed through verified professionals.

The wedge is not "file your taxes." The wedge is: there is money you already earned that was withheld and never credited back to you. Here is the schedule to recover it.

Design posture

- Consumer platform first; APIs are a distribution channel, not the pitch
- Nigeria-only depth before any regional breadth
- Free delivers one genuine result, then quotas convert; BVN is never free at steady state
- Every price in Naira, everywhere, including pitch materials

PART II: THE PRODUCT

Answers you can defend

A tax assistant restricted to published law, calculators tied to sections of the statute, a credit health score fed by compliance, guided Skills, and a verified marketplace. Every surface cites its source.

4 · The Tax Assistant

The assistant answers questions by retrieving relevant passages from the knowledge base of Nigerian tax law and assembling a response that names its sources. The system is built on a discipline, not a trick: **an answer without a citation is not shipped**. Responses that fall below the confidence bar carry a low-confidence flag and route the user to a verified professional instead of guessing.

- Single conversational thread per topic, in the user's chosen language
- Every answer cites NTA, NTAA, FIRS guide, or circular material
- High-stakes matters (audit, objection, appeal) trigger mandatory referral
- Answers carry the user's locale, so money phrasing and citations follow the language

5 · The Calculators

Four deterministic engines produce the figures. They never free-associate: the same inputs produce the same outputs, and each result carries the legal reference that produced it.

Calculator	Computes	Legal basis on every response
PAYE	Employment income tax across 17 bands, reliefs applied	NTA 2023, Schedule 1
VAT	7.5% standard rate, input/output reconciliation, exemptions	FIRS VAT Guide
WHT	Withholding by payment type and recipient status, 5-30%	NTA 2023, s.15; FIRS circulars
CIT	Company income tax; small-company relief rates	NTA 2023

Identical inputs cached 24h do not re-charge credits. Rules are versioned; when circulars change, the knowledge base re-indexes and citations move with it.

6 · The Credit Health Score and the Compliance Flywheel

The score is an **indicative Credit Health Score for education and self-improvement**, labelled as such on every screen. It is not a licensed bureau report, and the platform never holds itself out as one. Official bureau data (CRC, FirstCentral) enters only through partnership and is presented as the bureau's report, never ours.

Factor	Weight	Sourced from
Income stability	30%	Bank data via read-only open-banking connection (Mono)
Compliance history	30%	Filing calculations, payment records, platform activity
Savings rate	25%	Statement analysis
Debt burden	15%	Existing loan payments visible in statements

The flywheel

- 01 Compliance generates signal.** Every calculation, filing estimate, and verified document is a data point about behaviour.
- 02 Signal strengthens the score.** Consistent filing and timely payment move the number.
- 03 Better score improves access.** Lenders and partners read the factor breakdown, not just the number.
- 04 Access drives usage.** Users return to keep the streak; cooperative and employer Skills manufacture verifiable income for the whole group.

STARTER SNAPSHOT (FREE)

Preview locked after first view

The proprietary asset is the dataset: compliance behaviour linked to identity rails (BVN, NIN, TIN, CAC) across tax types and languages. Every platform interaction manufactures it; nobody else is collecting it.

7 · The Skills Engine

A Skill is a guided mini-workflow surfaced as a chip above the assistant's text box. Each has a fixed input, a defined output card, a credit cost, and a tier gate. Skills are how the platform grows revenue without growing interface complexity.

MVP Skills (build in Phase 1-2, demo on camera)

#	Skill	Output	Money
01	WHT Credit Recovery	Dated claim schedule from contracts and payment advices, pinned to canvas	5% success fee on recovered credits via pro filing: the highest-revenue-first bet
02	TCC Readiness Pack	Live readiness tracker, missing-document checklist, assembled bundle	N2,500 per pack, renews yearly
03	Ajo / Cooperative Ledger	Group ledger with weekly entries; per-member verifiable income certificate	N100–200 / member / month
04	Employer Compliance Badge	Monthly PAYE audit pass, dated badge card, regulator-ready report	N200–500 / employee / month

Wave-two Skills (ship in waves after adoption)

#	Skill	Money
05	Rent WHT Autopilot: tenancy tracking, 10% WHT computed per rent payment	Per-unit annual fee (property managers)
06	Salary Structure Optimizer: lawful relief modelling, compliant payslip template	N1,500 / report
07	Notice Translator: FIRS or state notice explained in plain or local language	Free 1/month, Plus unlimited
08	Invoice WHT Checker: instant "deduct X, remit by date" verdict before payment	Free 3/day teaser, Plus feature
09	BN or Ltd? Quiz: registration decision guide, CAC fee estimate	Free acquisition magnet; pro referral on intent
10	Payslip Decoder: every line explained, under-claimed relief flags	Free 2/month, Plus unlimited

Future bets (Filing Rooms, Diaspora Tax Desk, Score-Gated Offers) wait until their stated prerequisites are true: marketplace supply, double-taxation depth, score credibility. Options, not promises.

8 · The Knowledge Base and the Verified Marketplace

Knowledge base

The knowledge base is a structured library of Nigerian tax material, maintained in a format that non-engineers can edit and that re-indexes when a document changes:

- **P0 (launch-critical):** Nigeria Tax Act 2023; Tax Administration Act 2023; FIRS VAT Guide; personal income tax schedules
- **P1:** Withholding tax circulars; Capital Gains Tax material; latest FIRS public rulings
- **P2:** State IRS guides (Lagos first); tax appeal tribunal decisions; industry guides

Every article ships only after review by a licensed tax practitioner and a Content Editor. The admin console tracks version history, publish state, and re-indexing, with an audit log of every change.

The marketplace

There is no official public CAC API. Verification is therefore layered, not single-source:

- 01** The professional enters their CAC registration number.
- 02** Mono's Lookup API validates the business name and status.
- 03** The professional uploads the CAC certificate as documentary proof.
- 04** An administrator reviews the queue and approves or rejects.
- 05** Approved profiles appear in the marketplace with the verified badge.

Discovery combines a browsable grid (filter by city, service, rating; sorted by distance when the user shares location) with natural-language matching through the assistant ("I need a VAT expert near Lagos Island"). Contact details (phone, email, WhatsApp) render only to logged-in users and are excluded from public pages, so the directory cannot be scraped.

PART III: THE SIX-PHASE PLAN

24 weeks, scaffold to launch

Software first, adoption before scale, and a legal gate before any real user data. The demo track proves the experience; the production track hardens it. Both run to the same design.

9 · Objective and Scope

Phase 1's objective is a working platform that demonstrates the full loop (ask, calculate, score, refer) before deeper capital is committed. Two tracks run in parallel and are never confused:

Track	What it is	Rule
A: MVP Demo	A fast, fully behaved build on a lightweight backend with clearly labelled seeded data, used for the 4-5 client pitches and the investor deck	Nothing in Track A is presented as production. It exists to sell.
B: Main build	The production architecture on managed Postgres with the real integrations (identity, bank data, payments, jobs)	Real user data flows only after NDPC registration and the impact assessment complete.

10 · Phase 0-1: Foundation and Core API (Weeks 1-5)

Phase 0 (Weeks 1-2). Brand finalised, CAC company registration started, repository and environment stood up (hosting, managed database, background jobs, secrets management).

Phase 1 (Weeks 3-5). The API skeleton with key management, rate limiting, and the first calculators:

Capability	Detail
API key lifecycle	Generate, list, revoke; keys stored hashed; per-key usage metering
Tax calculation endpoints	Income tax (PAYE) and bracket lookup, first shipping calculators
Rate limiting	100 requests/minute per key, enforced server-side
Developer documentation	OpenAPI spec and a basic developer portal with sandbox

Phase 1 exit criteria: a partner can sign up, take a key, calculate a PAYE liability from the docs alone, and be rate-limited, all on the sandbox.

11 · Phase 2-3: Tax Assistant and Document Pipeline (Weeks 6-12)

Phase 2 (Weeks 6-8): the tax assistant

- Knowledge base ingested: NTA, NTAA, FIRS VAT Guide (P0 set)
- Chat endpoint returns grounded answers with citations
- Confidence threshold and mandatory professional referral for high-stakes topics
- Webhook callbacks for long-running questions
- Language switcher live on landing, auth, dashboard shell, and chat (four-language framework, core flows translated)

Phase 3 (Weeks 9-12): the document pipeline

- Upload for receipts, invoices, payslips; library storage with extraction previews
- Extraction of amounts, dates, tax identifiers, vendor descriptions
- Report generation (expense and tax summaries) as an async job with webhook
- Bulk upload on the professional tier

Capability	Phase 2 ships	Phase 3 ships
Cited answers	Core NTA/NTAA/VAT set	WHT circulars, CGT, rulings added
Documents	Not yet	Upload, extract, attach into conversation
Reports	Not yet	Expense and tax summary PDFs
Languages	Framework + core flows in four languages	Agent answers follow user locale end to end

The demo script is eight minutes: hook, signup, cited answer, invoice to calculation, credit snapshot, referral, admin views, quota wall. Every beat is a Phase 2-3 deliverable.

12 · Phase 4-5: Credit Engine and Developer Platform (Weeks 13-20)

Phase 4 (Weeks 13-16): the credit engine

- Tax compliance history endpoint; rule-based credit score v1 (model upgrade later)
- Credit health dashboard: score, factors, simulator, refresh jobs
- BVN and NIN verification via Mono (teaser: 2 free within 60 days, then paid)
- Infrastructure-as-code and monitoring

Phase 5 (Weeks 17-20): the developer platform

- Developer dashboard: keys, usage per key, webhook management
- Sandbox environment mirroring production endpoints
- Usage analytics and limit alerts
- Public OpenAPI specification

13 · Phase 5.5-6: Marketplace and Launch (Weeks 19-24+)

Phase 5.5 (Weeks 19-22): the tax professional marketplace

- Professional application with CAC verification (registry, certificate, admin review)
- Marketplace listing, profile pages, proximity search with map view
- Professionals embedded into assistant search so natural queries find them

Phase	Weeks	Exit criterion
0: Foundation	1-2	Repo, brand, CAC filing started
1: Core API	3-5	PAYE from docs alone; rate limiting live
2: Assistant	6-8	Cited VAT answer in four languages, on camera
3: Documents	9-12	Invoice to extraction to report, end to end
4: Credit	13-16	Starter score, factors, BVN teaser live
5: Developer platform	17-20	Sandbox, webhooks, analytics live
5.5: Marketplace	19-22	First verified pro live in the directory
6: Launch	21-24+	Public launch; first paying conversions

PART IV: BUSINESS

Naira-only, quota-enforced, compliance-gated

Tight free limits, BVN as the paid hook, margins documented per tier, and a regulatory gate the product treats as a feature: no real user data moves until registration and impact assessment complete.

14 · Pricing and Access Tiers

All customer-facing pricing is in Naira. Free delivers one genuine result and then requires a plan; paywalls trigger on value, not curiosity. The full tier table is reproduced in Appendix A; the shape:

	Free	Plus	Professional	Enterprise
Price	₦0	₦5,000/mo	₦25,000/mo	Custom
Annual (save 20%)	-	₦4,000/mo	₦20,000/mo	Contracted
Assistant messages	5/day, 60 lifetime cap	100/day	Fair-use unlimited	Pooled / contracted
Calculations	5/day	50/day	Fair-use unlimited	Contracted volume
Document uploads	2/day, 10/month	20/day	100/day + client docs	Contracted
Credit score	1 starter snapshot	Full + daily refresh + simulator	Full + client scores	Portfolio scoring
BVN checks	0 (2-teaser / 60 days)	5/mo included	20/mo included	Contracted rate
Extra BVN	₦350	₦350	₦300	Contracted
API access	100 sandbox calls/mo	5,000 calls/mo	50,000 calls/mo	Custom + SLA
Seats	Single user	Single user	3 seats included	SSO + custom

Quotas are enforced in code, server-side, with daily resets at 00:00 WAT and monthly resets on the billing anniversary. Hard stop at cap with an upgrade card naming the exact limit. Admin overrides exist and every one is audit-logged.

15 · Unit Economics

Every metered action has a documented unit cost, revalidated monthly against provider bills. If any unit moves more than 20%, quotas are re-cut before prices change.

Action	Unit cost	Notes
Grounded assistant message	₦5	Budget serving + one embedding pass + retrieval
Tax calculation	₦3	Rules engine + logging; identical inputs cached 24h, no re-charge
Document upload + extraction	₦15	Parse + chunk + extract; failed extractions refund
Report-chart generation	₦8	Render + data assembly
Credit score refresh	₦5	Compute only
BVN verification	₦90	Provider lookup incl. failure buffer; failures billed by provider
TIN / CAC-status lookup	₦150	Provider blended range

Acquisition and margin, per tier

Tier	Typical user / month	Heavy (p90)	Margin read
Free	~₦370	~₦900	Deliberate loss leader; max exposure ~₦1,500 (lifetime 60-message cap and daily caps bind) inside the ₦2,000 CAC envelope
Plus ₦5,000	~₦2,250	~₦4,000	~55% margin typical; ~20% on heavy users
Professional ₦25,000	~₦6,700	~₦12,000	~73% margin typical; ~50% heavy; fair-use and per-client sanity checks
Enterprise	Cost-plus, contracted		Never below 60% margin, contract caps

Payback logic

One Plus conversion contributes roughly ₦2,750 after serving costs. At a ₦400 average free-user cost, that single conversion pays for about seven acquired free users. Target: at least one Plus conversion per ten active free users within ninety days. BVN pay-per-use (₦350 against a ₦90 cost) is the highest-margin line and is pushed at every identity-gated moment.

16 · Revenue Model

#	Stream	Mechanism	Who pays	Phase
1	Subscriptions	Plus and Professional tiers; annual discount pulls cash forward	Consumers, pros	1
2	Identity pay-per-use	BVN at ₦350 (₦90 cost), TIN/CAC lookups	Consumers, onboarding flows	1
3	Skills fees	WHT recovery 5% success fee; TCC packs ₦2,500; ajo ₦100-200/member; employer badge ₦200-500/employee	Users, employers, cooperatives	1-2
4	Marketplace	Contact reveal and priority placement; take-rate as scoped	Professionals	2
5	Partner API	Sandbox free; 5k and 50k call tiers; overage metering	Fintechs, payroll, ERP tools	2
6	Enterprise	White-label reports, portfolio scoring, SSO, SLA	Banks, institutions	2-3
7	Embedded rails (future)	Tax and verification rails for other platforms; not promised until scoped	Platforms	3

Composition shifts over time: Year 1 is subscription-heavy; Year 2 adds API volume and identity pay-per-use; Year 3 layers enterprise contracts and marketplace take-rate.

17 · Go-To-Market

- 01 Prove it works, on camera.** Track A demo against the 8-minute script for 4-5 warm client leads: tax-reporting fintechs, government-adjacent projects, accountants.
- 02 Content as the top of funnel.** Blog and knowledge-base articles on the reform-era questions people actually search; every article is reviewed by a licensed practitioner before publishing.
- 03 Developer outreach.** Nigerian tech communities (Twitter/X, DevC) for the API surface; sandbox is free by design.
- 04 Professional supply first.** The marketplace only converts if verified pros exist; supply acquisition precedes consumer demand marketing.
- 05 The BVN moment.** Identity verification is where free users already have intent; the teaser creates the habit, pay-per-use captures the rest.

18 · Regulatory and Compliance

Compliance is a gate, not a backdrop. The demo track (seeded data only) proceeds while registrations run in parallel; **no real user BVN, bank link, or filing goes live before the gate items complete.**

When	Item
Now	CAC company registration; lawyer engaged
During demo build	DPIA-lite review (mock data only); draft privacy notice (English)
Before production	NDPC registration (data controller of major importance); full DPIA; Data Protection Officer appointed (may be outsourced, on paper); four-language notices; licensed-pro review live
Before bank/enterprise deals	Penetration test, residency answers, SLA and DPA templates

The two bright lines

- **The FIRS line.** No scraping or unofficial integration of any government system. All content derives from published law and guidance, cited per answer. The agent gives general information, never representation; high-stakes matters trigger referral.
- **The CBN line.** Not a licensed credit bureau, never presented as one. The score is indicative, for education and self-improvement. Bureau data enters only via partnership, as their report. No lending from our own balance sheet.

19 · Security and Trust

Four data classifications govern everything the platform holds:

Level	Examples	Rule
Restricted	BVN, NIN, TIN, bank tokens, API secrets	Never stored raw unless unavoidable; encrypted; minimal access; full audit
Confidential	Statements, payslips, filings, credit factors, client lists	Encrypted at rest and in transit; owner plus explicitly granted roles only
Internal	Support tickets, verification docs under review, usage counters	Staff roles only
Public	Blog, docs, verified pro business profiles (name and services, not contacts)	Freely servable, still rate-limited

Locked rules: raw BVN/NIN never persisted (verdict, provider reference, last-3 hint only); bank credentials never seen by us (read-only, revocable tokens); marketplace contacts render only to logged-in users; identifiers stripped before any processing. Breach response: assess, contain, notify NDPC and users within 72 hours.

20 · Capital Plan: the ₦10,000,000 Phase 1

The Phase 1 budget is ₦10,000,000, sized for a six-month build that ships the demo track, hardens the production path, and pays the compliance gate. The full month-by-month burn and revenue scenarios are detailed in the companion document, *Creditax.ai: Financial Projections*.

Allocation	Amount	Share	What it buys
Engineering and product	₦4,000,000	40%	Six months of build (lead developer plus contracted product design), the full demo surface, calculators, assistant, canvas workspace
Go-to-market	₦2,500,000	25%	Paid acquisition within the ₦2,000/user envelope, content production, demo video, professional-supply outreach
Infrastructure	₦1,200,000	12%	Hosting, managed Postgres with retrieval, background jobs, serving and extraction providers, identity lookups, maps, storage and image delivery at production scale from Month 1
Compliance and legal	₦800,000	8%	CAC registration, NDPC registration, full DPIA with counsel, four-language legal notices, licensed-practitioner review of knowledge-base content
Operations	₦500,000	5%	Corporate banking and payments setup, accounting tooling, monitoring and status infrastructure
Contingency	₦1,000,000	10%	Provider price movement, security review, and runway buffer

Stage discipline: hardware is not in scope at any price in Phase 1; the marketplace takes supply before demand spend; the production data gate is funded in this budget so it is never the excuse.

21 · Risk Register

Risk	Severity	Mitigation
Incorrect or ungrounded tax answers	CRITICAL	Citations mandatory; golden test set of Nigerian tax questions; confidence bar with mandatory professional referral; licensed-practitioner review of all knowledge-base content
NDPA / NDPC non-compliance	HIGH	DPIA before production; NDPC registration as data controller of major importance; DPO on paper from day one; 72-hour breach workflow
Regulatory change (FIRS forms, rates)	HIGH	Versioned rules and re-index jobs; circulars tracked as P1 documents; citation trail updates with every change
Free-tier cost blowout	HIGH	Lifetime 60-message cap plus daily quotas enforced server-side; max exposure ₦1,500/user against a ₦2,000 envelope
Provider concentration (identity, bank data)	MEDIUM	Provider pinned per environment; fail-closed demo path; multi-provider notes maintained (no reliance on defunct services)
Competition from generic assistants	MEDIUM	The moat is Nigeria-only cited depth, the compliance-credit dataset, and the verified marketplace, none of which a generic product accrues
Marketplace supply stall	MEDIUM	Supply acquisition precedes consumer spend; pro-side tooling (bulk calc, white-label) makes joining worth it even with few clients
Conversion below target	MEDIUM	Quota walls name the exact limit; BVN teaser builds the habit; annual discount pulls cash forward; scenario bands (companion document) set expectations before spend
Solo / key-person risk	MEDIUM	Docs-as-code foundation, runbooks, modular services; the working paper and foundation docs are the bus factor
Payment fraud on subscriptions	LOW	Local PSP with 3-D Secure; webhook signature verification; no card data on platform servers

Severity reflects impact on launch and licence to operate. The compliance rows are funded in the Phase 1 budget (Section 20) and gated in the roadmap (Part III).

22 · Key Performance Indicators and Glossary

Six KPI layers

Layer	Metrics
Usage	Messages/day; calculations/day; documents extracted; report generations
Trust	Citation coverage on answers (target: 100%); referral rate on low confidence; professional verification turnaround
Money	MRR; free-to-paid conversion (target: 1 per 10 active free users / 90 days); BVN pay-per-use volume; ARPU per tier
Marketplace	Verified pros onboarded; contact reveals; referral-to-contact conversion
Compliance	DPIA milestones; NDPC registration status; knowledge-base review coverage; breach drill results
Product	Uptime (target 99.5%); p95 response under 500ms; API sandbox signups (target 100 in 6 months, 25 active)

Glossary of principal terms

Term	Meaning
Canvas	The persistent workspace where assistant answers render as cards (calculations, checklists, extracts) rather than chat bubbles
Skill	A guided mini-workflow with a fixed input, output card, credit cost, and tier gate
Credit	The internal unit of quota (message = 1, calculation = 2, upload = 3, BVN = 25)
Credit Health Score	The platform's indicative score for education and self-improvement; not a bureau report
DPIA	Data Protection Impact Assessment, required before high-risk processing goes live
NDPC	Nigeria Data Protection Commission; regulator under the Nigeria Data Protection Act 2023
TCC	Tax Clearance Certificate; unlocks contracts, visas, and loans; the object of Skill 02
WHT	Withholding tax; deducted at source by clients, claimable by vendors as credits
BVN	Bank Verification Number; the identity rail behind verification flows
Track A / Track B	The demo build (seeded data, for selling) and the production build (real integrations, gated)

APPENDIX A

Pricing Tables

Reproduced from the pricing foundation (September 2026). Currency rule locked: Naira only, everywhere.

Full tier comparison

	Free: ₦0	Plus: ₦5,000/mo (₦4,000 annual)	Professional: ₦25,000/mo (₦20,000 annual)	Enterprise: Custom
Who	Consumers trying us out	Active consumers, freelancers, SMEs	Tax pros and firms	Lenders, fintechs, institutions
Assistant chat	5 msgs/day, 60 lifetime cap	100 msgs/day	Unlimited fair-use	Pooled / contracted
Calculations (PAYE/VAT/WHT)	5/day	50/day	Unlimited fair-use	Contracted volume
Document uploads	2/day, 10/month cap	20/day	100/day + client docs	Contracted
Report-chart generations	2/day	10/day	Unlimited fair-use	Contracted
Credit score	1 starter snapshot, preview locked after	Full + daily refresh + simulator	Full + client scores	Portfolio scoring
BVN verifications	0 (+ 2-teaser / 60 days)	5/mo included	20/mo included	Contracted
Extra BVN lookups	₦350	₦350	₦300	Contracted rate
Marketplace contact reveal	Masked until login	Full	Full + priority placement	-
Team seats / invites	-	- (single user)	3 seats included	SSO + custom
Shared canvas links	-	-	Yes (view/comment)	Yes
Connected apps	2	10	Unlimited	Unlimited
Pro practice tools	-	-	Clients, bulk calc, white-label	Yes
API access	100 sandbox calls/mo	5,000 calls/mo	50,000 calls/mo	Custom + SLA
Support	Community	Email (48h)	Priority (24h)	Dedicated + SLA

Internal credit accounting

Action	Credits	Notes
Assistant message (grounded answer)	1	Charged on reply, not on send
Tax calculation	2	Identical inputs cached 24h do not re-charge
Document upload + extraction	3	Failed extractions refund
Report-chart generation	2	
Credit score refresh	2	
BVN verification	25	Always charged on provider call; teaser covers first 2
TIN / CAC-status lookup	5	
API call (partner)	1	Webhook retries do not re-charge

Appendix B: Open Decisions

Tracked in the foundation documents. Nothing below is promised in this paper; each resolves before the phase that depends on it.

#	Decision	Current state
1	Payments provider for subscriptions	Local PSP with 3-D Secure (Flutterwave or Paystack class); final pick at Phase 4
2	Enterprise BaaS-style embedded rails	Under consideration as an Enterprise add-on; not promised until scoped
3	Pilot site for the 8-minute demo	4-5 warm client leads; sequence locked behind demo stability
4	Bureau partnership for official reports	CRC / FirstCentral presented as their report, never ours; terms open
5	DPO arrangement	Outsourced or part-time acceptable at this stage; must exist on paper with published contact
6	WHT recovery filing partner	Via verified marketplace pros; success-fee split open
7	State-IRS expansion order	Lagos first; order of subsequent states open
8	Filing Rooms / Diaspora Desk / Score-Gated Offers	Deferred until each stated prerequisite is true
